

1. Briefly describe what the `animate()` function does in JQuery.

2. What is a selector in JQuery?

By using a common CSS-style syntax we can select parts of the web page and that is how we use selectors.

- Example of selector in JQuery is `$("p")`. It select all paragraphs in html.

3. What selector would you use to select all text inputs inside a div with a `text-boxes` class?

```
$(".text-boxes input [type=text]")
```

4. What does the `append()` method do in JQuery?

```
$(".class").append("is used to add specified content at the end  
of the selected element")
```

5. What does the `empty()` method do in JQuery?

```
$(".div").empty("removes all child from the selected element")
```

6. What does the following code do `$(document).ready(function(){})` ?

```
$(document).ready(function("it will run when the DOM is ready  
for js code to execute and to add function() it will run once the entire  
page is ready")){}
```

7. What does the `.blur()` function do in JQuery.

`$(".div").blur()` is used to remove focus from an element in this example it is all the div's)

8. How would you select a class in JQuery?

`$(".exampleClass")`

9. How would you select an ID in JQuery?

`$("#exampleID")`

10. Find and implement an image slider or gallery plugin using at least three images from Unsplash or another free image source. Add all the required HTML, CSS and JavaScript files to a repo called `your-name-js-frameworks-ma-1`.
